Thank You for Your Purchase!

We're thrilled that you've chosen our **QuickSitemap Dynamic Sitemap Generator for Sngine**. This tool ensures that your website is search-engine-friendly, making it easier for search engines to index your site effectively. Below, we've provided a quick guide to help you install and start using the tool effortlessly.

How to Install

Upload the files to your root directory

Open root/.htaccess file and add

```
# Sitemap
RewriteRule ^sitemap/?$ modules/sitemap.php [L,QSA]
```

1. Upload the Files

- Locate the `sitemaps` folder included in your download package.
- Use an FTP client or your hosting file manager to upload the **entire folder** to your website's root directory following the file structure, if you have a custom theme, you should upload the tpl file to that theme.

(The root directory is typically the folder where your main `index.php` file is located.)

1. Access the Sitemap

- Open your browser and visit:

`https://yourwebsite.com/sitemap`

Replace `yourwebsite.com` with your actual domain name.

2. That's It!

- The dynamic sitemap tool is now ready and fully operational. You can start using the links to your various sitemaps or submit the main sitemap to search engines like

Submit Your Sitemap to Google Search Console

To maximize your website's SEO benefits:

1. Go to [Google Search Console](#).
2. Select your property (your website).
3. Navigate to **Sitemaps** in the left-hand menu.
4. Add the URL for your main sitemap, for example:
`https://yourwebsite.com/sitemaps/sitemap.php`
5. Click **Submit**.

This will ensure search engines are regularly updated with your latest content.
