Thank You for Your Purchase!

We're thrilled that you've chosen our **QuickSitemap Dynamic Sitemap Generator for Sngine**.
This tool ensures that your website is search-engine-friendly, making it easier for search engines to
index your site effectively. Below, we've provided a quick guide to help you install and start using
the tool effortlessly.

How to Install

1. **Upload the Files**
   - Locate the `sitemaps` folder included in your download package.
   - Use an FTP client or your hosting file manager to upload the **entire** `sitemaps` **folder**
     to your website's **root directory**.
     (The root directory is typically the folder where your main `index.php` file is located.)
2. **Access the Sitemap**
   - Open your browser and visit:
     `https://yourwebsite.com/sitemaps`
     Replace `yourwebsite.com` with your actual domain name.
3. **That's It!**
   - The dynamic sitemap tool is now ready and fully operational. You can start using the
     links to your various sitemaps or submit the main sitemap to search engines like
     Google or Bing.

Submit Your Sitemap to Google Search Console

To maximize your website's SEO benefits:

1. Go to [Google Search Console](#).
2. Select your property (your website).
3. Navigate to **Sitemaps** in the left-hand menu.
4. Add the URL for your main sitemap, for example:
   `https://yourwebsite.com/sitemaps/sitemap.php`
5. Click **Submit**.

This will ensure search engines are regularly updated with your latest content.

Need Support?
